

*Parisa Nematollahi* (Iran) obtained a MSc in Inorganic Chemistry in 2011 from the Islamic Azad University, Iran, and a MSc in Nanochemistry in 2016 from the University of Maragheh, Iran. She joined our group in 2016, and is currently working on density functional (DFT) calculations for the computational design of heterogeneous catalysts for plasma catalyzed dry reforming of methane. She is currently a junior FWO postdoc researcher, studying elementary processes through atomistic simulations of various heterogeneous reactions on tailored nanocatalysts.
